How all organisations are responding

“How can I create stability?”

How do I respond and adapt operations quickly?

How do I ensure the safety of our employees?

How do I monitor and communicate what's happening?

Stabilise
your organisation

“How do I get reopen my business?”

How do I know when to reopen operations?

How do I identify changes I need to make to my business?

How do I build a foundation of trusted data I can rely on?

Reopen
your workplace

“How will my operation grow?”

How do I shift to a data-driven organization?

What new digital and data skills will my employees need?

How do I keep employees and customers informed?

Grow
your operation

Stabilize your organisation

Optimising Emergency Room Efficiency down to 32 hours

Visits

Avg Length of Stay (Hours)

14,611

46.3

Where are patients coming from?

What is the age range of patients?

For what Diagnosis?

How frequent are their visits?

When are they coming?

How many Patients did each ER Physician see?

Office Social Distancing Floor Plan

The map below shows a sample office and the impact of social distancing requirements. Each sitting location is surrounded by a bubble approximately 6 feet in diameter. Red bubbles indicate sitting locations that do not adhere to this requirement (i.e. intersect with other bubbles), while orange bubbles show those that do (i.e. do not intersect). Note: Locations separated by walls are not counted as intersecting.

Disclaimer: This is only a starting point for a true analysis of an office space. There are any number of additional factors that would need to be taken into account, such as the movement of people around the office, usage of shared spaces and resources (conference rooms, copiers, restrooms, water coolers, refrigerators, etc.), air movement and ventilation, usage of masks, etc. Physical distance is only one such factor that must be understood before office spaces can be considered safe working environments. This particular example shows that one of the most basic factors (social distancing) is still a significant issue for most work spaces.

The Most

Don't have business analytics: it's too hard

The Many

Waste countless hours in Excel with poor results

The Few

Rely on an army of engineers and experts

Is there another way?

Data Literacy

Common Myths

- No data or dirty data
- No infrastructure
- We have reports
- No legislative framework
- No budget
- No technical knowledge
- Requires political will

Examples

We are data people.

Because Technology's Complicated Enough.
